

HNDIT4242-Computer Services Management

Week 01
Service Concept

Lesson Objectives

- Define and understand the concept of a service in IT.
- Identify key customer needs and expectations in IT services.
- Learn how to measure and ensure customer satisfaction in service management.

1. Definition of a Service

- A **service** in IT refers to any activity that provides value to customers **without transferring ownership** of physical products.
- **Examples:**
 - **Cloud computing (Google Drive, AWS, OneDrive):** Allows users to store and access data remotely.
 - **IT Helpdesk Support:** Provides solutions to technical issues without selling any hardware.
 - **Software as a Service (SaaS) (Microsoft 365, Zoom, Netflix):** Users subscribe to software instead of purchasing it.

2. Understanding Customer Needs

- **Customers expect:**
 - **Reliability:** The service should be available when needed.
 - **Efficiency:** The service should be fast and easy to use.
 - **Problem Resolution:** Quick responses to issues.
- **Example:**
 - An e-commerce company expects **99.9% uptime** from their hosting provider to prevent lost sales.

3. Determining Customer Satisfaction Levels

- **Methods to measure satisfaction:**
 - **Surveys & feedback forms** (Google Forms, Typeform).
 - **Customer complaints** – Monitoring repeated issues.
 - **Net Promoter Score (NPS):** Measures customer loyalty by asking, “How likely are you to recommend this service?”
